

Anthranilic acid Antibody – Mouse Monoclonal

Ref: IS013

The monoclonal anti-Anthranilic acid antibody 10G1-F1 was validated for immunohistochemistry (IHC) in human brain tissues. Highly specific, as demonstrated by competitive ELISA, the antibody consistently delivered clean and reproducible stainings.

Clonality	Monoclonal antibody (clone 10G1-F1)
Host	Mouse
Valided applications	IHC
Reactivity	Reacts with all species
Format	50µL

INFORMATIONS

Product overview

Product name	Anthranilic acid antibody 2-AA antibody Anti- vitamin L1 antibody
Synonyms	Anti- Anthranilate antibody Anthranilate antibody 2-Aminobenzoic acidantibody
Immunogen	Conjugated Anthranilic acid
Clone	10G1-F1
Specificity	When tested in competitive ELISA, the anti-anthranilic antibody did not show any significant cross reactivity with 3-hydroxyAnthranilic acid

Storage

Form	Liquid
Purity	Purified IgG
Concentration	0,5mg/ml
Storage	Store at 4°C

Storage buffer	Store at +4°C for short term (1-2 months). Aliquot and store at -20°C for long term. Avoid repeated freeze / thaw cycles
Material safety datasheet	Download MSDS

PROTOCOLS

Immunohistochemistry (IHC)	Dilute at 1:50-1:500. Perform heat antigen retrieval (pH=6) before initiating IHC staining protocol on paraffin-embedded and frozen sections
Immunofluorescence (IF)	Dilute at 1:50-1:500 on paraffin-embedded and frozen sections. Perform heat antigen retrieval and incubate with incubate with fluorescent secondary antibody conjugate
Comments	Optimal working dilutions must be determined by the end-user
Restrictions	For research use only

#TITRE

Anthranilic acid detection by IHC in human brain
 Immunohistochemical analysis of human caudate-putamen highlights Anthranilic acid accumulation in the cytoplasm of glial cells. Paraffin-embedded brain tissue was subjected to pH=6 antigen retrieval followed by overnight incubation with primary antibody (dilution 1/50). After incubation with polymer conjugated secondary Ab, DAB was used to reveal the staining.

#TITRE

Affinity & specificity of anti-Anthranilic acid antibody
Competitive ELISA demonstrates that low amounts of Anthranilic acid conjugate are required to abolish antigen-antibody reaction (high affinity), while rising concentrations of 3-OH-Anthranilic acid conjugate do not affect reaction (high specificity).

Image not found or type unknown

#TITRE

Anthranilic acid
Tryptophan catabolism along the kynurenine pathway has been extensively investigated over the past decades for its roles in immune regulation and neurotransmission. Anthranilic acid is synthesized directly from L-kynurenine, to produce 3-hydroxyanthranilic acid without generation of neurotoxic 3-OH-Kynurenine. Recently, Anthranilic acid has been described in organismal death of *C.elegans*, as well as in pathogen *Pseudomonas aeruginosa*'s tryptophan catabolism.
