

Kynurenine / Tryptophan ratio ELISA pack I High Sensitivity

Ref: ISE-2227R

The Kynurenine/Tryptophan ratio ELISA pack enables quantitative measurements of tryptophan catabolism along the kynurenine pathway in a large number of samples. The two kits included in the pack are ready to use. Highly sensitive, with a minimum sample volume of 20µl, they permit the performance of longitudinal studies in mice.

Sample type	Plasma, Serum, Cell culture supernatant, (Urine)
Kit capacity	2 x 96 tests
Sensitivity	LoD KYN: < 47.5ng/ml LoD TRP: < 1.2µg/ml
Range	KYN: 0/100 - 10000ng/ml TRP: 2.5 - 250µg/ml
Reactivity	Reacts with all species

INFORMATIONS

Product overview

Product name	Kynurenine/Tryptophan ratio ELISA pack – composed of 1 x BA-E2200 kit and 1 x BA-E-2700 kit
---------------------	---

Description	Two enzyme immunoassays (ELISA) allowing the quantitative determination of L-Kynurenine to L-Tryptophan ratio in urine, plasma and serum samples
--------------------	--

Labels	CE, RUO, IVD (EU only)
---------------	------------------------

Format	2 x 96-well plate
---------------	-------------------

Samples	Plasma, serum, cell culture supernatant, (Urine)
----------------	--

Minimum sample volume	20µL
------------------------------	------

Reactivity	Reacts with all species
-------------------	-------------------------

Standard range	KYN: 0/100 – 10000ng/ml TRP: 2.5 – 250µg/ml
-----------------------	--

Sensitivity	LoD KYN: < 47.5ng/ml LoD TRP: < 1.2µg/ml
--------------------	---

Specificity	No significant cross-reactivity was observed with L-Tryptophan and L-Kynurenine analogs. See product pages for L-Kynurenine ELISA and L-Tryptophan ELISA
--------------------	--

Storage	Store at 2-8°C for to 6 months
----------------	--------------------------------

Datasheets

IVD: [Instructions for use – TRP kit](#), [Instructions for use -KYN kit](#)

RUO: [Instructions for use – TRP kit](#), [Instructions for use -KYN kit](#)

PROTOCOLS

Sample collection & storage	<u>Plasma/Serum</u> : EDTA-, Heparin- or Citrate- samples stored at 2-8°C for up to 48h or -20°C for longer period (up to 6 months)
Sample preparation	<u>KYN</u> : Sample acylation (90 min) <u>TRP</u> : Sample precipitation (15 min) and derivatization (2h)
ELISA	Antisera overnight incubation, revelation and read steps (1h)
Detailed protocol	IVD: Instructions for use – TRP kit , Instructions for use – KYN kit RUO: Instructions for use TRP kit , Instructions for use – KYN kit

Kynurenine / Tryptophan ratio ELISA pack

Kynurenine - Tryptophan ELISA standard curves

Examples of standard curves obtained with the Kynurenine and Tryptophan ELISA kits. In these competitive ELISA, optical density is invertly correlated with Kynurenine/Tryptophan levels. Only serves as example - do not use for calculation.

Kynurenine / Tryptophan ratio ELISA pack

Kynurenine/Tryptophan ratio ELISA in IDOi-treated mice

Plasma samples were collected from MCA205 tumor-bearing mice treated with either vehicle or IDO inhibitor (GDC-0919) and determination of kynurenine to tryptophan ratio (KTR)

Kynurenine / Tryptophan ratio ELISA pack

Kynurenine / Tryptophan in cell culture supernatants

Mature human dendritic cells (mDCs) were cultured together with HLA-mismatched CD4⁺ T cells (mixed lymphocyte reaction context) and exposed for 72 hours with increasing concentrations of a reference IDO1 inhibitor. Supernatants were then collected for kynurenine and tryptophan content measurement by mean of ELISA (ISE-2227 Kynurenine/tryptophan ELISA pack). Kynurenine content (through KTR) is dose-dependently decreased by IDO inhibition.

L-Kynurenine/ L-Tryptophan ratio ELISA in CT26 tumor cell lines

Murine CT26 colorectal cancer cell line was modified to stably express indoleamine 2,3 dioxygenase (IDO1). Its empty-vector counterpart cell-line (Mock) was used as a negative control for the transfection, while WT was the parental CT26 cell line. These different cell lines were cultured in 24-well plates for 48 hours. Kynurenine and Tryptophan were then measured with dedicated ELISA kits and KTR ratio.

Kynurenine/Tryptophan ratio ELISA in LPS-treated mice

C57BL/6 mice were exposed to 10mg/kg of LPS or with PBS for 24 hours. Mice (n=5/experimental group) were bled at the tail vein using EDTA-Monovette®. Kynurenine and Tryptophan were quantified using ELISA kits. As an inducer of inflammatory response, LPS triggered a significant increase in plasmatic KTR level.
