

# L-Glutamate Antibody – Mouse Monoclonal

Ref: IS018

Anti-L-Glutamate antibody IS018 is a mouse monoclonal Ab specifically selected by competitive ELISA for its affinity and specificity features. Using with the [STAINperfect immunostaining kit A](#), our antibody directly labels L-Glutamate in whole mounts, cell culture and tissue sections.

<b>Clonality</b>	Monoclonal antibody
<b>Host</b>	Mouse
<b>Applications</b>	<a href="#">IHC</a> / <a href="#">IF</a>
<b>Reactivity</b>	Reacts with all species
<b>Tested samples</b>	whole mounts, cell culture, tissue sections
<b>Staining procedure</b>	<a href="#">STAINperfect immunostaining kit A</a>
<b>Format</b>	50 µL
<b>References</b>	<a href="#">Cited 1 paper</a>

# INFORMATIONS

## Product overview

<b>Product name</b>	L-Glutamate antibody – mouse mAb
<b>Synonyms</b>	Anti-L-Glutamic acid antibody
<b>Immunogen</b>	Conjugated L-Glutamate
<b>Specificity</b>	When tested in competitive ELISA, the anti-conjugated Glutamate antibody did not show any significant cross reactivity with its analogs, including D-Glutamate
<b>Clone</b>	1D51B1
<b>Volume</b>	50 µL

## Storage

<b>Form</b>	Liquid
<b>Purity</b>	Purified IgG
<b>Storage</b>	Store at +4°C for short term (1-2 months). Aliquot and store at -20°C for long term. Avoid repeated freeze / thaw cycles
<b>Material safety datasheet</b>	<a href="#">Download MSDS</a>

PROTOCOLS

IF - Cell cultures, Whole mounts, Tissue sections	Dilute antibody with the antibody diluent provided in the <a href="#">STAINperfect immunostaining kit A</a> . Use at 1/250 -1/1000 dilution. Follow the STAINperfect protocol suited to your sample
Comments	Optimal working dilutions must be determined by the end-user
Restrictions	For research use only
Full protocol	<a href="#">Download STAINperfect protocol for L-Glutamate staining</a>

### Staining of glutamatergic neurons in mouse primary cortical culture

Our optimized mouse monoclonal anti-L-Glutamate antibody allows the detection of L-Glutamate within primary neurons in cell culture. Staining was performed using STAINperfect immunostaining kit A, according to the protocol optimized for cell culture. After addition of a fluorescent labeled

### Affinity & specificity of anti-L-Glutamate monoclonal antibody 1D5-1B1

Competitive ELISA demonstrates that low amounts of L-Glu conjugate are required to abolish antigen-antibody reaction (high affinity), while rising concentrations of D-Glutamate and L-Aspartate conjugates do not affect reaction (high specificity).

### L-Glutamate and GABA in adult mouse primary cortical neurons

Adult mouse primary cortical neurons were stained with mouse monoclonal anti-L-glutamate antibody (red) combined with anti-GABA rabbit polyclonal antibody (green). Staining was performed using optimized sample preparation with STAINperfect immunostaining kit A and according to the protocol for cell culture. Fluorescent labeled secondary antibody were used and pictures were acquired by confocal imaging.

### L-Glutamic acid (L-Glutamate)

Amino acid L-Glutamic acid (L-Glutamate) is the major excitatory neurotransmitter in the vertebrate nervous system. Agonist of NMDA, AMPA, Kainate and metabotropic receptors, L-Glutamic acid regulates synaptic plasticity, and is thus involved in learning and mnemonic processes. However, by activating NMDA receptors, L-Glutamic acid may also lead to neuronal damage and death. Glutamate toxicity is thus associated with the pathogenesis of neurodevelopmental and neurodegenerative disorders.
