

IS-I-0200R

Kynurenic Acid ELISA kit

The Kynurenic Acid ELISA kit is optimized for sensitive quantification of kynurenic acid (KYNA) in serum. This competitive, user-friendly assay is species-independent and requires only 50 μ L of sample, making it well-suited for research applications. Researchers have already applied it to human serum, plasma, and cell-culture supernatants to investigate neuroinflammatory disorders—including Alzheimer’s disease, COVID-19, multiple sclerosis, bipolar disorder, and autism spectrum disorder—as well as cancer.

[Cited in 11 papers](#)

Sample type	Serum
Capacity	96 tests
Sensitivity	0.53ng/mL
Range	1.40 - 74ng/mL
Assay time	Sample derivatization (90min), overnight incubation, ELISA revelation & read step (1h)
Reactivity	Reacts with all species
Application	Research use only
Storage	Store at 2-8°C for to 6 months
Sample collection & storage	Serum: Do not use lipemic, haemolytic samples, as well as samples containing precipitates or fibrin strands. Store samples at 2-8°C for up to 48h or -20°C for longer period (up to 6 months)
Sample preparation	Sample derivatization (90 min)
ELISA	Antisera overnight incubation, revelation, and read steps (1h)
