

SA-E-6100

Saliva Testosterone ELISA kit

This Saliva Testosterone ELISA kit enables quantitative measurement of testosterone in human saliva samples within 90 minutes. It can be used to assess endocrine function, reproductive health, and hormonal variations in behavioral or metabolic studies. Designed for both in vitro diagnostic and research applications, the non-invasive saliva-based assay is provided in a 96-well plate format, allowing for high-throughput testing and efficient turnaround times.

Sample type	Saliva
Capacity	96-well plate
Sensitivity	6.1 pg/mL
Range	0/10 – 1,000 pg/mL
Assay time	90 min
Reactivity	Human
Application	Research use or in vitro diagnostics (IVD in EU-only)
Storage	Store at 2-8°C for to 6 months
Sample collection & storage	Saliva: collect 5 samples within a period of 2 hours (multiple sampling), before meal. Store samples at 2-8°C for up to one week. For longer periods, store at -20°C.
Sample preparation	Enzymatic conjugation (60 min)
ELISA	Incubation, revelation and read steps (30 min)
