

MS-E-5100

Urine Cortisol ELISA kit

This rapid Urine Cortisol ELISA kit is designed to quantitatively measure cortisol, a crucial stress hormone, in adult human urine within 75 minutes. Measuring cortisol is essential for evaluating psychiatric disorders such as stress, depression, and anxiety, as well as sleep disorders and endocrine diseases. Suitable for both in vitro diagnostic and research purposes, the kit's 96-well plate format enables high-throughput testing and ensures quick results.

Sample type	Urine
Capacity	96-well plate
Sensitivity	0.47 ng/mL
Range	0/1 – 200 ng/mL
Assay time	75 min
Reactivity	Human
Application	Research use or in vitro diagnostics (IVD in EU-only)

Storage	Store at 2-8°C for to 6 months
Sample collection & storage	Urine: Store samples at -20°C for up to 6 months
Sample preparation	Enzymatic conjugation (60 min)
ELISA	Incubation, revelation and read steps (15min)
